PROJECT METHODOLOGY & KEY FINDINGS
DATA • METHODOLOGY • INSIGHTS • LIMITATIONS

01 | DATA OVERVIEW

COMPANIES ANALYSED
DLF • GODREJ • LODHA • OBEROI • SOBHA

ANALYSIS PERIOD
January 2013 – January 2026

DATA DIMENSIONS
Closing Price • Previous Close • Trading Volume • Turnover

PURPOSE
Compare historical stock performance, market risk, and trading activity across five real-estate companies.

02 | KPI METHODOLOGY

PERIOD RETURN
Percentage change between the first and last available closing prices in the selected period.

ANNUALIZED VOLATILITY
Standard deviation of daily returns multiplied by √252.

MAXIMUM DRAWDOWN
Largest peak-to-trough decline within the selected period.

TOTAL TURNOVER
Sum of the recorded trading value.

VOLUME SPIKE RATIO
Daily trading volume divided by the company's average daily volume baseline.

03 | KEY FINDINGS

HISTORICAL PERFORMANCE
OBEROI and SOBHA recorded the strongest period returns in the current dashboard results.

RISK COMPARISON
Compare annualized volatility and maximum drawdown to understand the differences between return variability
and downside risk.

TRADING ACTIVITY
Use monthly volume and turnover trends to compare participation and trading value across the five companies.

VOLUME SPIKES
Identify dates when a company's daily volume was unusually high relative to its average daily volume.

INTERPRETATION
Historical results describe the selected period only. They do not guarantee future performance or establish the
cause of a trading spike.

04 | LIMITATIONS & CONCLUSION

LIMITATIONS
- Analysis depends on the availability and quality of the historical stock data.
- Results change according to the selected company and date range.
- Volume spikes indicate unusual activity, not its underlying cause.
- Historical performance does not predict future returns.

CONCLUSION
This Power BI dashboard combines performance, risk, and trading activity analysis to support comparisons
across five real-estate companies using interactive filters and DAX measures.
